Packages and features

visage|SDK integrates a comprehensive range of computer vision technologies related to human faces in an easy-to-use, fully documented software development kit that supports a wide area of applications. The main features include face and facial features detection and tracking (including 3D head pose, gaze, eye closure, full 3D head model and more), as well as face recognition and face analysis including gender, age and emotion estimation.

This section contains more details about three modules of visage|SDK: FaceTrack, FaceAnalysis, and FaceRecognition.

FaceTrack

Track faces, facial expressions and eyes/gaze in real-time

Learn more

FaceAnalysis

Get detailed data on people's gender, age and emotions

Learn more

FaceRecognition

Measure the similarity between faces and recognize identities
